Projects

ML-Based Personality Traits Detection Using Handwriting Analysis| Final Year Project

Developed a standalone desktop application using Python using libraries such as tensorflow, numpy, matplotlib, etc. and AIML algorithms like CNN to train the AIML model for handwriting analysis. The application is based on graphology technique to identify personality traits of a person which will help in criminal investigations, psychiatrist's researches etc. to get an idea about intent of a person. The model is accurate approximately 70% in making predictions.

Personal Portfolio Website| Portfolio Project

Designed and developed a responsive portfolio website using HTML and CSS to present projects, certifications, skills, and professional information with a modern and user-friendly interface. Integrated a contact section for communication and improved online professional presence.
